

I am writing to express my oposition to this docket. The interference that this technology will cause to licensed users of the radio spectrum should not be ignored. The fact that this technology will cause harmful interference is not in doubt. Several other countries have banned deployment of this technology for precisely this reason. In the field trial locations for BPL, the HF radio spectrum was rendered completely unusable. This radio spectrum is used by many services including the military and amateur radio. Numerous orginizations have stated their concerns and opposition to this technology including the NTIA, ARRL, and the American Red Cross. This technology will also suffer ingress interference from licensed users of the radio spectrum. In short, this is the wrong technology at the wrong time. There are many other solutions available for the distrubution of broadband internet service that should be pursued rather than this technology.

Respectfully,

Kevin Berlen, PG-18-11541, K9HX
